- Mastering WordPress development and knowing the basics of PHP.

Nassim Hani Ikene

Javascript developer

Personal project

Meal Crafter
Next.js v13 web application that utilizes AI to provide personalized meal recommendations based on user ingredients, allergies, and dietary preferences. Additionally, it offers the ability to generate meal images using Midjourney by web scraping Discord with Puppeteer. Check out the video preview: https://tinyurl.com/486nuaby

Meteo Forecast
A React app that displays the weather forecast using Open Weather Map API by searching an area or using localization, it will also display a map of the area using Google Maps. Check out the preview: https://meteo-org.vercel.app

Poker Simulator
Poker Equity is a web application that simulates poker games in order to give equity for a hand depending on the board and the hands that it is against. The number of hands playing is customizable from 2 to 4 players, you can also add the flop and turn cards. It is fully built with React. Check out the preview here: https://poker-equity.vercel.app
